TITLE: A universal logic element. ^{16C} Class 42, No. 184520

SOURCE: Izobret prom obraz tov zn, no. 15, 1966, 110

TOPIC TAGS: logic element, computer logic, computer component

ABSTRACT: This Author Certificate presents a universal logic element. The element includes a resonance circuit and a detector, increasing the number of functions which the element can perform. The element also includes a frequency control automatic-oscillation generator. The resonance circuit and the detector are connected to the output of this auto-oscillation generator. The first input of the generator is connected to the control signal source. The control signals shape the discrete levels of the voltage or current, the number of which corresponds to the number of possible logic functions. The other inputs of the generator (the number of which is equal to the number of variables) are connected to the sources of the input logic variables. To simplify the logic element for the case of two variables which fulfill three logic functions constituting a complete system, a transistorized relaxation

ACC NR: AP6029944

generator is used as the frequency control generator. The triode bases of the relaxation generator are joined to the diodes which are connected in opposition. The common current of the diodes is connected through resistors to the sources of the input logic variables. The resistors are connected directly to the bases. The common current of the resistors is connected to the control signal source.

ABSTRACT: A universal multifunctional circuit is described which contains logic and switching elements whose interconnections form a multiterminal network. In order to assure that all terminals carry even loads, each terminal is connected to the first logic input of the first logic element and to the second logic input of the second logic element. The same terminal is joined to the output of the third logic

TITLE: A multiple-function element. Class 42, No. 186205 [announced by the Institute of Mathematics, Siberian Department AN SSSR (Institut matematiki Sibirskogo otdeleniya AN SSSR)]

SOURCE: Izobret prom obraz tov zn, no. 18, 1966, 128

TOPIC TAGS: logic element, electronic signal

ABSTRACT: This Author's Certificate introduces: 1. A multiple-function element containing a multistable element connected to sources of logical variables, a control signal source and a source of sinusoidal signals. The circuit of the multiple-function element is simplified by including a frequency-controlled resonant circuit connected to the source of logical variables as well as to the multistable element which stores the voltage to which the element is tuned for performing a given logical function. 2. A modification of this element which is simplified by using a nonlinear inductance in the series-connected resonant circuit. This inductance is made up of series-connected windings on two toroidal cores. Two constant magnetization windings are connected in opposition and tied to each logical variable source. The resonant

ACC NR: AP6033501

circuit is connected to the source of sinusoidal voltage and the inductance in the circuit is connected through a detector to the output amplifier. The magnetization winding which controls tuning of the resonant circuit is connected to the potential output of a spectrotron.

TITLE: Decimal adder with phase presentation of numbers

SOURCE: Priborostroyeniye, no. 8, 1966, 12-13

TOPIC TAGS: adder, decimal adder, *OFFICE MACHINE*

ABSTRACT: A decimal adder is briefly described which consists (see figure) of I - a pulse-phase multistable element and II - a carry-pulse shaping unit. The operation of the adder circuit is explained, and an operation time diagram of the carry unit is shown. The system clock frequency is 10 kc; pulse duration, 3 μ sec; pulse height, 6 v. Power supply, -12.5 and +12.5 v. The adder is intended for electronic desk calculators. Orig. art. has: 2 figures.

SOV/7-58-7-10/13

TITLE: New Data on the Distribution of Indium in Minerals of the Oxidation Zone (Novyye dannyye o rasprostraneniі indiya v mineralakh zony okisleniya)

PERIODICAL: Geokhimiya, 1958, Nr 7, pp 682 - 685 (USSR)

ABSTRACT: 32 mineral samples of the tin-lead-zinc deposit of Sarybulak (Tsentral'nyy Ty-n'-Shan', gory Ak-Zoo) were examined for their indium content (Table 1). On an average it amounts to 0.14 %. The determination was conducted by the polarographic method by N.V.Obolonchik, Institut obshchey i neorganicheskoy khimii AN USSR (Institute for General and Inorganic Chemistry, AS UkrSSR). 11 samples were completely and 3 partially analysed by T.N. Hozarchuk and N.V.Obolonchik at the above mentioned institute (Table 2). The results of these studies are: 1) Indium derives from the hypogene ores consisting of sulphides of Sn, Cu, Zn, Pb, Sb, Fe as well as from cassiterite. 2) The high concentration of In in the oxidation zone originates from the special circumstances of the deposit Sarybulak: by the large amount of carbonate of the environment the acid solutions soon become alkaline and the migration of indium stops. 3) Concentrators of indium in the hypergenetic

Card 1/2

New Data on the Distribution of Indium in Minerals of the SOV/7-58-7-10/13
Oxidation Zone

zone are hydroxides of iron, such as hydrohematite, goethite, hydrogoethite, furthermore hydrocassiterite and bindheimite. 4) Indium is most probably adsorbed by the hydroxygel of iron and tin, as well as by the gel of bindheimite because indium compounds are readily to be polarized. 5) As indium is adsorbed by positively charged gels it probably is present in the solution as oxyhydrate. There are 2 tables and 3 references, 2 of which are Soviet.

TITLE: Discoveries of Native Copper in Veins on Nagol'nyy
Kryazh (Ridge) (Donbass) [O nakhodkakh samorodnoy
medi v zhilakh Nagol'nogo kryazha (Donbass)]

PERIODICAL: Nauk. zap. Kiyivs'k. un-t, 1956, Vol 15, Nr 2, pp 115-
118

ABSTRACT: In the D'yakovo-Bobrikovo district on the Nagol'nyy
ridge, quartz-ankerite veins occur in shales and sandy
shales. The ore minerals, very irregularly distributed
in the vein bodies, are galena, sphalerite, pyrite,
chalcopyrite, and tetrahedrite. Secondary minerals in
the zone of oxidation include limonite, cerussite,
smithsonite, covellite, malachite, azurite, and native
copper. This latter is observed either in fractures in
quartz as disconnected plates or as separate dissemi-
nated lamellae of irregular form in ankerite. It also

Card 1/2

15-57-4-4571

Discoveries of Native Copper in Veins of Nagol'nyy Kryazh (Cont.)

occurs along the contact between the ankerite and quartz. The Cu is of supergene origin. Its formation was apparently due to the interaction of CuSO_4 and iron hydroxides.

Leadless glazes and the use of natural borates. S. A. Rakhman and B. I. Vishnevskii. *Stroitel. Materiya* 1938, No. 4, 33 8. Prita were prepel. with pandermite, hydrobonate, ulexite, etc. The ware produced was as good as that made with H₂O glazes. The charge must be well fritted to obtain transparent glass without inclusions of unmelted grains. The d. of the glaze must be 30-31° Bé. for ware with H₂O absorption of 9.5-12.8%. To obtain good luster the saggars must be doused with glaze and the upper saggars must be covered. Underglaze colors are obtained with an insufficient luster. The above-named borates can be used in their natural condition; ulexite, fines of borate rock, etc., can be used after conversion to borax. E. E. Stefanovsky

AUTHOR: Vishnevskiy, B.N., Professor

TITLE: A Common Program of Practical Exercises in Local Lore Study
is Necessary

PERIODICAL: Vestnik vysshey shkoly, 1959, Nr 4, p 79 (USSR)

ABSTRACT: Beginning with the 1955/56 school year, practical work in local lore study has been introduced in the geographical departments of pedagogical institutes. The author points out that at Perm' University, the Sverdlovskiy pedagogicheskiy institut (Sverdlovsk Pedagogical Institute) and the Chelyabinskiy pedagogicheskiy institut (Chelyabinsk Pedagogical Institute), the program for this course, worked out by the institutes themselves, differ from each other. He recommends that in the course of reorganization of the work of pedagogical institutes and universities this fact should also be taken into consideration.

ASSOCIATION: Permskiy gosudarstvennyy universitet (Perm' State University).
